Endurance benefits summary:

- Two zones so the area directly under the sitting bones (the area most susceptible to compressed tissue when sitting) gets the most relief
- Soft but durable polyurethane pad is a superior material
- Not limited to a constant pressure as you would be with foam
- Built-in pump stays with the cushion
- Quickly adjust air pressure with one hand—on-the-go!
- Lightweight—less than one pound

Sit longer without pain

with the

ENDURANCE

CUSHION

Use in
tractors, trucks,
or wherever sitting
becomes a pain!

AQUILA CORPORATION

THE ENDURANCE CUSHION

Source of Sitting Pain

Typically when you sit for prolonged periods of time, your posterior becomes numb and sore. This is because the tissue under the pelvic bones becomes compressed from your body weight and the circulation is restricted. The soreness and numbness are the result of compressed tissue and not having adequate blood flow.

Add to that the machine vibration and shock of a bumpy ride, and you can experience back pain as well as increased posterior discomfort.

The solution for pain-free sitting is to maintain circulation by eliminating the pressure to the compressed tissue. Most of the time, just simply standing and taking a break from sitting will do the trick. However, when on the job, standing frequently enough to relieve pressure is just not an option, especially if you want to keep productive and get the task completed.

The Endurance Cushion is the Solution

This unique seating cushion lets you adjust the pad pressure to exactly the comfort level you want, which is great for overall pressure, shock, and vibration relief. But the real effectiveness of this cushion design is that it has two air zones, one of which is located directly under the pelvic-bone area of the posterior. This design allows you to reduce pressure where you need it most, by giving greater relief to that tissue most susceptible to compression when sitting.

Operating the Endurance is Simple

Operating the Endurance cushion is simply done on-the-go with just one hand. For a firmer pad, adjust the selector valve to choose the zone and squeeze the pump to add some air. For a softer pad, just press the release button to let some air out. You can do this in either of the two zones by adjusting the selector valve, which is especially important for letting some air out of the zone directly under the sitting bones for additional relief. You are not limited to a constant pressure as you would be with foam. Even when temperature and altitude levels affect the inflation, make the adjustment in seconds—on-the-go!

Cushion is Soft and Durable

The Endurance cushion is made of heavy-gauge polyurethane, not vinyl like many other seat cushions on the market. Polyurethane is stronger and has been chemically engineered to have more elasticity than latex, neoprene, or vinyl. This elasticity is what makes the Endurance durable and more puncture-resistant. Polyurethane contains no latex proteins or chemical allergens.

The Endurance has a weight limit of over 400 pounds and is backed by a two-year limited warranty!

Ergonomically Designed

Aquila's goal in designing this cushion was to help keep you productive and on the job, while reducing fatigue and discomfort. Whether driving long range in a truck, sitting in a tractor traveling over rough fields, or operating heavy equipment, the Endurance is the answer to pain-free sitting.

When you are done working, use it for leisure travel, sporting events, on the hunting stand, or even your sitting chair at home. The Endurance is easy to move, simple to use, and very effective *wherever sitting becomes a pain*.

The Endurance Cushion comes with:

- 18" wide X 18" deep cushion
- Built-in bulb pump/air release button
- Selector valve for zone and pressure control
- Black, 4-way stretch, machine wash-and-dry cover with non-slip bottom
- Built-in carrying handle
- Straps/hook set for affixing to most any seat
- Two-year limited warranty
